

Sorted - High Level Business Plan

Business Overview

Sorted is a technology-driven home services platform focused on recurring subscription-based services.

The business operates as:

- a lead generation platform
- a managed marketplace
- a workflow orchestration platform
- a customer relationship management platform

The first launch brand will be:

- GardensSorted

Future expansion will include additional home service brands operating under the Sorted platform.

Examples may include:

- CleaningSorted
- RepairsSorted
- WindowsSorted

All brands will operate from a shared centralized technology platform.

Core Operating Model

Sorted acquires customers directly through:

- online marketing
- local targeting
- recurring subscription offers
- brand-led customer acquisition

Customers subscribe to recurring home service plans.

Sorted manages:

- customer relationships
- customer support
- scheduling
- workflow orchestration
- payments
- provider coordination
- operational oversight

Service delivery itself is completed by:

- self-employed local contractors

Providers operate as independent contractors while receiving:

- recurring work opportunities
 - centralized operational support
 - customer allocation
 - scheduling coordination
-

Customer Model

Customers will:

- subscribe online
- manage accounts through customer portals
- communicate through centralized support
- access multiple services through one account over time

The platform will prioritize:

- low-friction signup
- recurring subscriptions
- convenience
- operational reliability
- centralized communication

Recurring service continuity with the same provider will be preferred where operationally possible.

Provider Model

Providers will:

- onboard digitally
- operate as self-employed contractors
- claim or receive work allocations
- work within locality-based territories
- primarily communicate through WhatsApp initially

The provider model is designed to:

- minimize operational friction
- maximize recurring work consistency
- maintain flexible workforce scaling

Provider performance will be monitored internally through operational scoring.

Technology Platform

The business is being built as:

- a modular technology platform
- a workflow-driven operations system
- an AI-assisted management platform
- a multi-brand infrastructure

The platform will support:

- customer accounts
- recurring subscriptions
- provider management
- scheduling
- workflow automation
- operational CRM
- AI customer support
- communications orchestration

The backend platform will remain:

- service agnostic
 - brand agnostic
 - scalable for future vertical expansion
-

AI and Automation Strategy

AI systems will assist with:

- customer support
- workflow orchestration
- scheduling assistance
- operational recommendations
- communication handling
- escalation triage

The operational model is designed so that:

- AI handles routine operational tasks
- human admins manage escalations and oversight

The long-term objective is to maintain:

- low operational overhead
 - scalable automation
 - centralized operational control
-

Revenue Model

Primary revenue source:

- recurring customer subscriptions

Additional future revenue opportunities may include:

- premium subscription tiers
- annual plans
- one-off services
- provider tools/services
- cross-sold services across brands

The business is designed around maximizing:

- recurring revenue
 - customer retention
 - operational efficiency
 - locality density
-

Initial Launch Plan

Initial launch focus:

- Yorkshire, UK
- residential customers
- recurring gardening services

The initial objective is to:

- establish localized provider networks
- build recurring customer density
- refine operational workflows
- optimize AI-assisted operations

The platform architecture is designed to support future:

- geographic expansion
 - service expansion
 - operational scaling
 - additional home service brands
-

Long-Term Vision

Sorted aims to become:

- a centralized home services operating platform
- a multi-brand recurring services ecosystem
- an AI-assisted operational marketplace infrastructure

The long-term platform strategy supports:

- multiple services
- shared customer identity
- cross-service expansion
- recurring customer relationships
- operational automation at scale
